

HUSSAM ALKHATIB

Unity Game Developer | 3 Published Android Games | Computer Engineering Student

Irbid, Jordan | +962 79 809 8346 | hussamalkhatib24@gmail.com | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Engineering student and Unity/C# developer with hands-on experience taking mobile games from prototype to published Android releases. Published 3 games on Google Play, including PawDoku, and built dozens of Unity prototypes across gameplay, UI, progression, monetization, analytics, testing, and publishing. Also experienced in technical training, robotics, embedded systems, and AI projects built from first principles.

TECHNICAL SKILLS

Game Development: Unity, C#, Mobile Game Development, Gameplay Systems, UI/UX, Game Economy, Ads & IAP, Analytics, Google Play, Testing & Debugging

Programming: C#, C++, Python, JavaScript, HTML/CSS, Object-Oriented Programming, Git/GitHub

Engineering & AI: Arduino, Embedded Systems, Robotics, Artificial Intelligence, Machine Learning, Neural Networks

SELECTED GAME PROJECTS

PawDoku: Pet Logic Puzzles | *Unity, C#, Android* | [Google Play](#)

Designed, developed, and published a mobile logic puzzle game, owning the project from gameplay implementation through release.

Built puzzle logic, progression, UI/UX, boosters, save/progression systems, game economy, daily challenges, and player feedback systems.

Integrated ads, in-app purchases, analytics, notifications, Google Play services, testing/debugging, optimization, and Android publishing.

OrbiX | *Unity, C#, Android* | [Google Play](#)

Published arcade game focused on responsive movement, controls, scoring, and game feel.

Risky Landing | *Unity, C#, Android* | [Google Play](#)

Published mobile arcade game focused on timing, controls, gameplay loops, balancing, feedback, and release polish.

EXPERIENCE & LEADERSHIP

Independent Unity Game Developer | *Self-employed*

May 2021 - Present

Built dozens of Unity prototypes and gameplay experiments, progressing from rapid concepts to 3 published Android games. Handled end-to-end development across programming, UI systems, debugging, testing, mobile integrations, and Google Play publishing.

Arduino Instructor | Computing Technology Club (CTC)

Delivered hands-on Arduino training across multiple sessions to 250+ unique students, averaging approximately 30 participants per day.

Arduino Instructor | IEEE JUST Student Branch

Delivered a structured 5-day Arduino course for 25+ students, combining programming, electronics, embedded systems, and practical exercises.

Sponsorship Leader | IEEE JUST Student Branch

Supported sponsor outreach, partnership communication, proposal preparation, team coordination, and event support.

ADDITIONAL TECHNICAL PROJECTS & ACHIEVEMENT

Handwritten Digit Recognition Neural Network | *Python* | [GitHub](#)

Built and trained a neural network from the ground up to classify handwritten digits, implementing core learning logic manually rather than relying on high-level ML frameworks.

Also developed a small AI experiment for solving simple equations to deepen understanding of neural-network fundamentals.

3rd Place - TCRT24 Line Follower Competition

Competed as part of a two-person team, achieving 3rd place and earning a 150 JOD prize in the line-following robot competition.

EDUCATION

B.Sc. in Computer Engineering | *Jordan University of Science and Technology (JUST)*

Expected graduation: June 2027

Portfolio: 2hik4.github.io | Google Play: [Negative Zero Studios](#)
